DETAILED ACTION

Response to Amendment

1. Applicant's claim amendments and remarks received on 03/28/2011 have been entered. Pending claims 4, 6-9, 13-23 are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

As to claim 4, No prior art in record to teach, or render obvious, alone or in combination, that a method for the computer-assisted visualization of a three-dimensional anatomical object, comprising the following method steps:

- a) recording two or more diagnostic image data records of the object wherein at least one image data record comprises morphological image information of the anatomical object and at least one further image data record comprises functional image information relating to the anatomical object;
- b) defining an imaging specification for imaging the image data onto a common two-dimensional display plane, the definition of the imaging specification involving an identification of anatomical features of the object in at least one of the image data records and a determination of an object volume delimited by a curved surface in which

the anatomical features of the object are contained;

c) calculating a combined two-dimensional representation by imaging the two or more image data records according to the previously defined imaging specification onto the common two-dimensional display plane wherein a projection of the image information of the data records that is contained in the object volume is calculated during the calculation of the combined two-dimensional representation, wherein in order to calculate the combined two-dimensional representation, Cartesian coordinates within the common two-dimensional display plane are assigned to non- Cartesian surface coordinates of the curved surface.

As to claim 6, No prior art in record to teach, or render obvious, alone or in combination, that a method for the computer-assisted visualization of a three-dimensional anatomical object, comprising the following method steps:

a) recording two or more diagnostic image data records of the object wherein at least one image data record comprises morphological image information of the anatomical object and at least one further image data record comprises functional image information relating to the anatomical object, wherein the functional image information is obtained by evaluating a temporal sequences of morphological image data of the anatomical object;

b) defining an imaging specification for imaging the image data onto a common two-dimensional display plane, the definition of the imaging specification involving an identification of anatomical features of the object in at least one of the image data

records and a determination of an object volume delimited by a curved surface in which the anatomical features of the object are contained;

c) calculating a combined two-dimensional representation by imaging the two or more image data records according to the previously defined imaging specification onto the common two-dimensional display plane wherein a projection of the image information of the data records that is contained in the object volume is calculated during the calculation of the combined two-dimensional representation.

As to claim 13, No prior art in record to teach, or render obvious, alone or in combination, that a method generating a two-dimensional representation on a display plane of three-dimensional anatomical features of interest of an anatomical object, the method comprising:

recording a morphological diagnostic image record of the anatomical object and a functional diagnostic image record of the anatomical object;

delimiting an object volume which includes the anatomical features of interest of the anatomical object with a curved surface, the curved surface being defined in non-Cartesian coordinates; defining an imaging specification by:

a) projecting the anatomical features of interest from one of the morphological or functional diagnostic image records onto the curved surface to determine a first projection, the projecting of the anatomical features of interest onto the curved surface being performed in the non-Cartesian coordinates, and b) projecting the anatomical features along parallel rays from the curved surface onto the display plane to determine

a second projection, an imaging specification begin defined by the first and second projections;

using the imaging specification to project the anatomical features of interest of the morphological and functional diagnostic image records onto the display plane to generate the two-dimensional representation of the anatomical features of interest.

Conclusion

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
